linkedin.com/in/miguel-cardoso-32428314b

SKILLS

Cloud

AWS, GCP, Azure, Hetzner

Infrastructure

Kubernetes, Docker, Terraform, Ansible, Helm, Kustomize

CI/CD

ArgoCD, Buildkite, Jenkins, GoCD, GitHub Actions

Security

Vault, Sigstore, Trivy, Semgrep

AI

AI-Assisted Engineering, LLM APIs, Prompt Engineering, AI Agents

Observability

Prometheus, Grafana, Thanos, Datadog, SigNoz

Languages

Python, Bash, C#, SQL, YAML

EDUCATION

BSc Computer Engineering

Instituto Superior de Engenharia do Porto (ISEP)

2015 – 2018

- Specialised in software engineering, algorithms, databases, and web development
- Built a sports-venue booking platform over two semesters with ARMIS Group using Scrum, JIRA, and bi-weekly client sprint reviews
- Took part in an MIT-led program applying engineering fundamentals to real-world industry projects

PROFILE

I'm someone who enjoys figuring things out and learning along the way. I like working with people and doing my part to keep things running smoothly.

When I'm not working, I keep busy with a mix of hobbies. I play guitar, football and videogames, ride my motorcycle, hang out with my cat, and hit the gym to relax and recharge. I'm a big football fan, and even coached a U10/11 academy team.

Professionally, I love the DevOps and infrastructure side of IT. It lets me do what I enjoy most: automating and organising things.

EXPERIENCE

DevOps Engineer · Icligo

2026 – Present

- Building infrastructure for an AI-first travel platform covering accommodation, flights, and trip planning
- Designing and operating a microservice architecture on Kubernetes for scalability and independent service delivery
- Working with AI agents and AI-assisted tooling across development and day-to-day operations
- Establishing CI/CD pipelines and observability foundations for the new platform
- Embedding security into CI/CD with automated scanning, SBOMs, and signed container images

DevOps Engineer · FanDuel

2021 – 2026

- Ran infrastructure for the largest online horse-betting platform in the U.S., serving millions of high-traffic users daily
- Led the platform's full migration from GCP to AWS across multiple Kubernetes clusters for global scale and resilience
- Built a monitoring stack from scratch (Prometheus, Grafana, Thanos) for distributed clusters at scale
- Designed a GitOps CI/CD pipeline with ArgoCD and Buildkite for consistent, auditable deployments
- Centralised secrets with HashiCorp Vault and standardised provisioning via Terraform, Ansible, and Packer
- Authored a disaster-recovery playbook covering all infrastructure components

DevOps Engineer · Farfetch

2019 – 2021

- Supported and scaled infrastructure for a global luxury-fashion marketplace serving millions of users
- Automated large-scale deployments on Azure with Terraform and Docker
- Streamlined release pipelines with Jenkins and improved observability with New Relic
- Maintained asynchronous messaging (Kafka, RabbitMQ) and standardised configuration with Salt and Chef

DevOps Intern / Junior Full-Stack Developer · ARMIS Group

2018 – 2019

- Built a CI/CD proof-of-concept that delivered fully automated builds and deployments
- Developed full-stack features (frontend, backend APIs, and database design) for a real-time road-incident platform
